

The Dashboard Page

The **Dashboard** page serves as a “Home” page. This is the page you arrive at after user authentication, and is the page your return to after closing a RealPage product.

From this page, you can:

- Navigate Using The Header
- Access Your Products
- Access Resources
- Manage Your Profile

The Header

The **Header** allows you quick access to various areas of the product

- The **Hamburger** at the top-left displays the side menu which will take you to different sections of the application based on your permissions
- The **Home** button will take you back to your Dashboard
- The **Application Switcher** allows you quick access to you products as well as the ability to see your Favorites application by default.
- The **Person Menu** is a drop down menu you see when you click on your name in the upper right side of the Header. From here you can go to some of the more popular pages and products as well as sign out of the application

Application Switcher

Person Menu

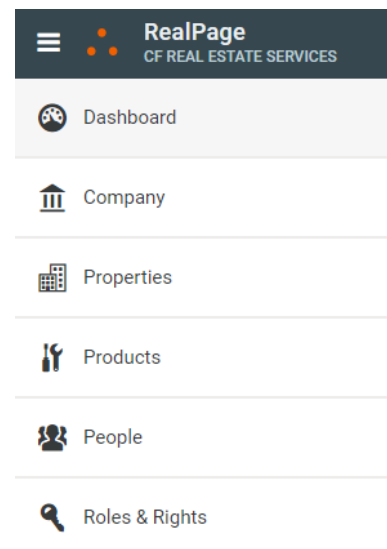

The Side Menu

The **Side Menu** is accessed by clicking the “Hamburger” icon in the top left of the Header.

To access the various sections of the application, select the appropriate menu item.

See image below:

The People Menu

In the Side Navigation there is a link called **People**. From here, you can access the list of all users of the application as well as view, filter, and make changes to users.

Some of the main functions allow you to Activate or Disable a user (or selected group of users), as well as Lock a user out of the system, or Unlock a user who has been locked out. This can also be performed on a single user or as a bulk update process.

You can also sort ascending or descending on any of the fields shown. There is a **More Filters** button that offers additional options.

Adding Users

To Add Users, select the “+ New User” button:

+ New User

From here, you can set up a user's credentials, set their User Type, and assign their Products, Properties, and Roles.

User Types

The three most common user types are:

Regular User – This person has their own private email address that can be used for sending personalized information about their account or account access

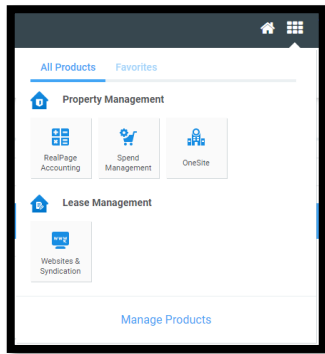

Regular User (no email) – This user does not have a private corporate email address. They may have a shared email account or no email at all. An email cannot be used to send personalized account information to the user. An optional “Notification Email” field is available that can be used for general, non-private, information.

RealPage System Administrator – This person has administrative access to all licensed applications. They create users as well as other RealPage System Administrators and perform administrative duties such as resetting passwords, disabling accounts, etc.

Using the Application Switcher

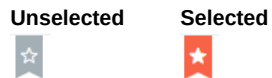

The Application Switcher allows for fast access when moving between products. There are three distinct features of the **Application Switcher**:

- The **All Products** tab – This shows you an icon for every product assigned to you.
- The **Favorites** tab – This tab only shows you the products you have selected as a “Favorite” (which can be set on the Products page)
- The **Manage Products** link – This link will take you to the Products page where you can see all of your products and select or deselect your Favorites

Favorites

From the **Products** page, you can select a product to be a **Favorite** by selecting the “favorites” badge.

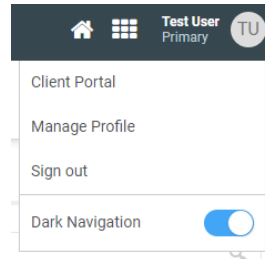

By selecting your favorite products, you can filter for easy access to select applications on the **Product Page** as well as in the **Application Switcher**

Using the Person Menu

The Person Menu is in the top right of the header. From here, you can:

- Open Client Portal if you have access
- Manage Your Profile
- Sign out of the application

There is also a toggle labeled “Dark Navigation”. This changes the background color of the side navigation between a choice of a “light” background, or a “dark” background.

Products

There are three ways to see your products

- If you select the Hamburger icon and then select **Products**, you will see your products by Product Family
- You can select the **Application Switcher**, and then select **Manage Products**
- You can also select the **View All** icon that will take you to the same Products page. The View All icon is located on the Dashboard, to the right, above the Product Tiles.

View All Icon

Manage Profile

The **Manage Profile** allows a user to update information about themselves.

If applicable to your security configuration, you can also update Security Questions or change your Password

RealPage Quick Start Glossary

Company - An organization that contracts with RealPage for one or more products or services. NOTE: One customer can have a production environment and a UAT environment for the same product.

User - A person that can access the Unified Login platform that facilitates access to RealPage products for a specific customer.

RealPage System Administrator - A customer user who has access to the Unified Login platform with ability to manage all user, products, properties, roles and rights for that customer, and can also create other RealPage System Administrators (Like a OneSite Super User but applies to all products).

Regular User - A user of one or more RealPage products who is an employee of the customer.

External User – Any user created by a customer’s administrator for an individual that is not an employee of the RealPage customer. Use this user type for 3rd Party vendors, owners, contractors, and asset managers, to include OneSite SDE Manager Users.

Role - Product Roles provide access to a set of related functionality within one RealPage product. In some products, users can be assigned one or more role. Some products may have previously referred to other terms for role, such as Profile, User Group, User Type, and Permission Group. However, we are aligning on the term “Role”.

Right - Product Roles for some products consist of specific rights that are included in the Role and can be separately enabled or disabled to build custom roles. Rights are more granular permissions within Roles that can be turned on or off individually.

Enterprise Role - A “template” of roles and rights for multiple products. As we migrate functionality to the Unified Login platform, we plan to facilitate management of Roles and Rights across all applications from a common UI. Enterprise Roles will streamline creating new users.

Persona - Planned functionality to facilitate access to different combinations of properties, products, roles, environments with ONE set of user credentials. For example, a person can be set up with access of a “Leasing Agent” at property “A”, and “Property Manager” access at property “B”.

Clone - Cloning a user allows you to select a user who has the same product access, property access, and Product Roles that you want to give another user. In addition, the ability to clone a role will allow you to inherit rights from that role as part of creating a new role.
